

MUH YAUMIL AKSAH HAMID

Software Engineer | Hardware Engineer

South Tangerang, Banten, Indonesia | (+62) 813-5513-0934 | yaumilaksah@gmail.com

<https://www.linkedin.com/in/yaumil-aksah/> | <https://yaumil-aksah.vercel.app/> | <https://github.com/AxVsel>

SUMMARY

Software Engineer and Hardware Engineer with hands-on experience building end-to-end web applications and IoT systems. Proficient in modern frontend and backend technologies, with a strong commitment to creating scalable solutions, optimizing hardware-software integration, and continuously adopting new technologies to deliver impactful products.

SKILLS

- Programming Languages: JavaScript, TypeScript, PHP, Python, C, C++
- Frontend: Vue.js, Nuxt.js, React.js, Next.js, Tailwind CSS, Bootstrap, HTML5, CSS3
- Backend: Node.js, NestJS, Express.js, GraphQL, REST API, WebSocket
- Database: PostgreSQL, MySQL, Redis, Supabase, MariaDB
- AI & Machine Learning: PyTorch, YOLOv5, OpenCV, CUDA, Computer Vision
- State Management: Pinia, Redux, Zustand
- Tools: Git, GitHub, Postman, Figma, VS Code, Google Colab, Trello, N8N, Docker, Apidog, Antigravity
- Cloud & Deployment: Vercel, Railway, Ngrok
- Embedded Systems: ESP8266, ESP32, ESP32-CAM, Arduino Uno, Arduino Nano

EXPERIENCE

Software Engineer — PT Unisia Tera Medika (JIH Hospital) *Oct 2025 - Present*

- Developed and maintained Hospital Information System (SIMRS) modules using Nuxt 3, Vue 3, TypeScript, and Tailwind CSS.
- Built reusable frontend components and composables to improve code maintainability and development efficiency.
- Integrated frontend applications with GraphQL APIs using Apollo Client, including queries, mutations, and data management.
- Developed pharmacy, cashier, billing, patient registration, and electronic prescription (E-Prescription) features for hospital operations.
- Contributed to backend development using NestJS, implementing and maintaining Radiology module features and API endpoints.
- Collaborated with backend engineers to design GraphQL schemas, troubleshoot API issues, and ensure seamless frontend-backend integration.
- Participated in AI-related initiatives to support hospital digital transformation and intelligent healthcare workflows.

Intern Full Stack Developer — PT GIT Solution (MoA Batch 9) *Sep 2023 - Dec 2023*

- Developed end-to-end web applications using EJS and Bootstrap for the frontend, and Express.js with Node.js for the backend.

Computer Technician Intern — Digiparts *Jan 2019 - Mar 2019*

- Performed routine maintenance and repair for computers and laptops.
- Diagnosed and resolved hardware and software issues.
- Installed and configured operating systems, drivers, and applications.
- Conducted data backup, recovery, and system optimization.
- Ensured devices operated efficiently and securely for end users.

EDUCATION

Bachelor of Informatics — Amikom University Yogyakarta *Sep 2020 - Aug 2024*

- Studied both software and hardware aspects of computing, including programming, networking, and embedded systems.
- Completed academic projects related to system development and integration: Traffic Light Simulation (IoT, AVR + Proteus), Smart Door (IoT, ESP32-CAM + Blynk facial authentication), Face Mask Detection (AI, YOLOv5 + PyTorch, >80% accuracy), and SIBI Sign Language Detection (Thesis, YOLOv5, 1,200-image dataset).
- Developed strong problem-solving, teamwork, and research skills through collaborative coursework and assignments.

Vocational High School, Software Engineering — SMKN 1 Banggai *Sep 2017 - Apr 2020*

- Specialized in web development and software using JavaScript, HTML, CSS, and Visual Basic.
- Completed an internship as a computer and laptop service technician.
- Achieved 2nd place in the LKS competition, IT Software Solution for Business category.

NON-FORMAL EDUCATION

Full Stack Developer Program — PT DumbWays Indonesia Technology *Apr 2025 - Oct 2025*

- Learned to build full-stack applications from scratch using React.js, TypeScript, Prisma, PostgreSQL, and other modern technologies.
- Developed and deployed real-world projects following best practices in frontend and backend development.
- Gained hands-on experience with API development, authentication, database management, and deployment.

PROJECTS

Hospital Information System (SIMRS) - AI Software Engineer *2025 - Present*

- Developed and maintained SIMRS modules including Pharmacy, Billing, Cashier, Patient Registration, Electronic Prescription (E-Prescription), and Service Transactions.
- Built reusable frontend components and integrated GraphQL APIs using Nuxt 3, Vue 3, TypeScript, Apollo Client, and Pinia; contributed to backend Radiology features using NestJS.

Tech Stack: Nuxt 3, Vue 3, TypeScript, GraphQL, Apollo Client, Pinia, Tailwind CSS, NestJS, MariaDB

ShareNote - Full Stack Developer *2025*

- Built a web application for sharing notes that can be read and collaboratively edited by users with granted access, streamlining collaboration.

Tech Stack: TypeScript, React.js, Next.js, Tailwind CSS, Prisma ORM, Supabase, Express.js, Node.js

GitHub — Frontend: [sharenote-fe](#) | Backend: [sharenote-be](#)

Circle - Full Stack Developer *2025*

- Built a minimalist, responsive social media platform where users can create posts, comment, reply, follow others, personalize profiles, and discover new connections.

Tech Stack: TypeScript, React.js, Vite, Shadcn/ui, Tailwind CSS, Prisma ORM, PostgreSQL, Redis, Express.js, Node.js

GitHub — Frontend: [circle-fe](#) | Backend: [circle-be](#)

FutsalGo - Full Stack Developer (Team Project) *2025*

- Built a web application for booking futsal courts quickly and conveniently with real-time court availability.

Tech Stack: React.js, Vite, TypeScript, Shadcn/ui, Tailwind CSS, Express.js, Prisma ORM, PostgreSQL, Node.js

GitHub Organization: [FutsalGo](#)

Chatfilm - Full Stack Developer *2025*

- Built an AI-powered chat platform for discussing movies, TV shows, and anime, including recommendations, storyline analysis, and cast details.

Tech Stack: React.js, Next.js, TypeScript, Tailwind CSS, Google AI Studio

Website: [chatfilm-seven-ten.vercel.app](#)

Indonesian Sign Language (SIBI) Recognition using YOLOv5 2024

- Developed a computer vision application to recognize the Indonesian Sign Language (SIBI) alphabet using YOLOv5, trained on a custom dataset for real-time hand gesture classification.
- Implemented model training, evaluation, and inference using GPU acceleration to improve recognition performance.

Tech Stack: Python, PyTorch, YOLOv5, OpenCV, CUDA

Smart Door (IoT) - ESP32-CAM + Blynk, Facial Authentication 2022

- Developed an IoT-based smart door lock system using ESP32-CAM for facial recognition authentication to control door access.
- Integrated the Blynk platform to send real-time notifications and identify users who successfully accessed the system.

Tech Stack: C, C++, ESP32-CAM, Blynk IoT, Facial Recognition Algorithm

Face Mask Detection - Computer Vision 2022

- Developed an AI-powered face mask detection system achieving over 80% classification accuracy using YOLOv5 and PyTorch for real-time compliance detection.

Tech Stack: Python, YOLOv5, PyTorch, Computer Vision
